INDUSTRIAL NOTES.

Mr. A. W. Wheatley, general manager of the Brooks plant of the American Locomotive Co., at Dunkirk, N. Y., has been appointed general manager of the Canadian Locomotive Co., at Kingston, Ontario.

The Alberger Pump Co., 140 Cedar St., New York, N. Y., has opened a branch office at 97½ Peachtree St., Atlanta, Ga., in charge of Mr. R. S. McMichael.

The branch at 503 Market St., San Francisco, Cal., is now in charge of C. F. Braun & Co., which succeeds the corporation known as Braun Williams & Russell.

TRADE PUBLICATIONS.

(The standard sizes for pamphlets and trade catalogs recommended by all the principal engineering societies of the United States are: 3½ x 6 ins., 6 x 9 ins. and 9 x 12 ins.)

CENTRIFUGAL PUMPS.—The Dixon Cascade Pump Co., 17-21 Camfield St., Newark, N. J.; 6 x 9½ ins.; pp. 10; illustrated.

The advantages of a line of very small handy centrifugal pumps are set forth at length in this catalog.

BALL BEARINGS.—Standard Roller Bearing Co., Philadelphia, Pa. Paper; 7½ x 10 ins.; pp. 22; illustrated.

Grooved ball and thrust bearings and some of their applications are described in this bulletin, which contains a number of pages with sectional drawings of various types of bearings of this sort, with tabulated dimensions for shaft sizes ranging from 1 to 6 ins.

STEAM TURBINES.—Kerr Turbine Co., Wellsville, N. Y. Catalog 19 (Superseding Bulletin 18). 6 x 9 ins.; pp. 48; illustrated.

In this catalog the design of this particular make of turbine is set forth, together with statements of the advantages of the special features of design. The catalog gives tables of dimensions for the whole line. This turbine is manufactured in only comparatively small sizes.

WATER SOFTENERS.—L. M. Booth Co., 136 Liberty St., New York City. Stiff paper; 6 x 9 ins.; pp. 16; illustrated.

Water softeners with capacities of from 3,000 gals. per hr. to 10,000,000 gals. per day are illustrated in the first few pages of this catalog. The apparatus consists of tanks in which chemicals, usually quick lime and soda ash, are deposited once daily. A mechanism is provided in the tank for keeping the chemicals agitated and uniformly distributed throughout the solution. The chemicals are introduced into a central tube within the main tank and open at the bottom.

CONCRETE SILOS.—Universal Portland Cement Co., Chicago and Pittsburgh. Paper; 6 x 9 ins.; pp. 88; illustrated.

What silos are for, why concrete is a suitable material for their construction, and how concrete silos are made (whether of the monolithic or the block type), are dealt with in this pamphlet. The form construction, the concrete and steel proportioning, and the cost of the work are among the subjects dealt with, and there are numerous illustrations of structures of this class. The pamphlet is intended specially for the farmer and the rural contractor, but there is much in it to interest the engineer and the general contractor.
